## SUMMARY

---

In September, 2001, after passing the entrance examination successfully, I could start educating in NODET (National Organization for Development of Exceptional Talents) junior high school and continued educating to get my diploma in September, 2006.

During my junior high school, I entered many national scientific competitions and I came in top places. Then in September, 2007, to educate in civil engineering field, I entered Azad University and got my B.A degree.

Nevertheless, I was always interested in computer programming and I created software's for many companies and different people, independently.

I have also designed various plugins and frameworks special for Persian language (such as android date picker for Jalali calendar), and I published them as open source. You can check out my recent open source projects from <https://github.com/HosseinRashno>.

In August, 2014, I have been hired by "Pasargad Payment Service Provider Company" and I am working here as front-end and back-end developer.

## WORK HISTORY

---

### Full Stack Developer
