SUMMARY

In September 2001, after passing the entrance examination successfully, I started educating in NODET (National Organization for Development of Exceptional Talents) junior high school and continued educating to get my diploma in September 2006.

During my junior high school, I entered many national scientific competitions and I came in top places. Then in September 2007, to educate in civil engineering field, I entered Azad University and got my B.A degree.

Nevertheless, I was always interested in computer programming and I developed software's for many companies and different clients.

I have also designed various plugins and frameworks specially for Persian language (such as android date picker for Jalali calendar), and I published them as open source. You can check out my recent open source projects from <https://github.com/HosseinRashno>.

In August 2014, I was hired by "Pasargad Payment Service Provider Company" and I was working there as a front-end and back-end developer.

After spending about 2 and half years in Pasargad, In February 2017 I quit Pasargad and I was hired in Hacoupian company. In Hacoupian I was told to design and develop Smart TV applications, Android application, develop some Idea in Augmented Reality field and analyze customer activity in Hacoupian stores (Create and analyze Heat map from customer movement in store). I'm proud to say I successfully did all of these tasks just by myself.

I always tried to work with most recent technologies and I love to work in these fields. In my opinion, some of the most interesting works that I have done till today are working with Augmented reality and Virtual reality (In HoloLens and Android), Physical web and Beacon devices, and mobile games development with unity.

I always have a passion for learning new technologies like NoSQL databases, Angular, React, Node JS and other technologies.

I have recently been working on a project that include Beacon technology, Raspberry PI devices and face detection. Our goal is to show custom content in our showcase to each customer. This content will be chosen based on their age, their purchase history and their sex.

WORK HISTORY

Full Stack Developer

E-Commerce unit, 08/2014 to 04/2015

Pasargad E-Payment Services - Iran

- Developed internal portal with these technologies: Python, Django, Bootstrap, Apache web server and Linux (CentOS) as server

Full Stack Developer

Software Development Unit, 04/2015 to 02/2017

Pasargad E-Payment Services - Iran

- Developed software for InSpire POS devices with C and eclipse
- Developed mobile apps for Android OS with Java, eclipse and android studio (<https://goo.gl/a1f87K>)
- Developed websites with C# and asp.net
- Developed internal chatting system with socket programming technology. That project was including a windows service, a JavaScript framework and a C# library to easily implement on any web or windows application
- Developed windows services with C#
- Developed windows software's with C#

Full Stack Developer

Technology Unit, (HACOTECH) 02/2017 to Present

Hacoupian Clothing Industries Inc. - Iran

- Develop Hacoupians Android application
- Develop Smart TV applications for these platforms: Orsay (Samsung), Legacy(Samsung), WebOS(LG) with Samsung TOAST technology and other web technologies like SCSS. ... (TOAST is Samsung's open source project based on Cordova which is a multiple-platform solution for developing smart TV application.)
- Create Maya model for Augmented reality menu in Hacoupians Android application
- Implementing Augmented reality menu in Android application with Vuforia
- Provide physical web in Hacoupian stores and nearby feature in mobile app by Beacon technology
- Analyze videos from surveillance cameras in stores and generate heat map from customer movement with AxxonSoft software
- Currently working on Raspberry PI devices

EDUCATION

Islamic Azad University

Licentiate degree, Civil Engineering

2007 – 2011

NODET (National Organization for Development of Exceptional Talents)

High School

2001 – 2007

MY SOLO PROJECTS

NAME	TYPE	DESCRIPTION	PROJECT PAGE
64	Open source	64 is a simple android wear game that tries to entertain you for a few minutes and teaches you the Iranian names for boys and girls through the game	https://github.com/HosseinRashno/64
BodoBado	Free with in app purchases	BodoBado is a 2d side stroller mobile game and is created with Unity3d game engine. BodoBado has android, IOS and windows phone versions	https://cafebazaar.ir/app/com.Rashno.BodoBado/
Hacoupians Augmented Reality	Video	A video of Hacoupians Augmented Reality that is implemented in Hacoupians android application	https://youtu.be/Z3GTFWK42x0
Hafiz	Premium	Hafiz is an android wear app which is designed for smart watches.	https://cafebazaar.ir/app/org.rashno.hafezwatch/ https://myket.ir/app/org.rashno.hafezwatch/
IranAddressJS	Open source	IranAddressJS is a iOuerv plugin that provides selection for cities and provinces (of Iran) in a simple way	https://github.com/HosseinRashno/IranAddressJS
Sublime Text 2 BIDI	Open source	Adding Bidirectional text support for Sublime Text 3	https://github.com/HosseinRashno/Sublime-Text-2-BIDI
